

Water, Light and Fire

Graham Wickens

22nd February 2019

- In order to “freeze” water a controllable flash is needed, set to lowest power setting so that it is on for the shortest possible time.
- 1/10000 second
- I used a Pika 200 “pocket flash” with a wireless camera trigger
- Secured it on a tripod
- The bulb was held on a glazed black floor tile with Blu Tac and the whole set up put in a paddling pool to catch the water
